KVICHAK MARINE INDUSTRIES

Kvichak Marine Industries has been delivering high quality, dependable, cost effective vessels for patrol and SAR missions for over 30 years. Our clients include military, police, search and rescue as well as fisheries enforcement organizations who depend on Kvichak vessels for critical missions every day, year after year.

The Kvichak Marine in house design and engineering staff provide a full range of services from mission assessment through construction, delivery and life cycle support. Additionally our long standing relationships with numerous independent design firms including Camarc Design, Incat Crowther, Jensen Maritime, Elliott Bay Design Group and others provide our clients with a range of expertise not available from most builders. All Kvichak Marine patrol and survey vessels are built to comply with all necessary regulatory and class society rules.

We understand that one size does not fit all. We would like the opportunity to discuss and understand the unique needs of your organization and to deliver your next vessel.
